MEANINGFUL PARTICIPATION

Engaging Ontarians

What You Told Us

People from across the province shared personal stories, thoughts and ideas on our proposals. There were strong views, passionate voices and very real experiences gained through lived experience with government programs and services. We heard it all.

LED Light Pilot Project

Through Budget Talks, Ontarians told us that the Province should start replacing traditional lighting with energy-saving LED lights on all new provincial highway corridors. While the Province currently uses LED lights on provincial lighting, the government is launching a high mast lighting LED pilot project, starting at Renforth Drive and running west along Highway 401 for 1.1 kilometres. The pilot project will ensure that all safety conditions are met before full implementation.

Budget Talks also demonstrated how an online community can come together to collaborate on ideas — through their comments and votes.

TORONTO

Adopting a **“digital-by-default”** approach focused on making online services so easy to use that Ontarians prefer to use them over traditional methods of service delivery

1. We must build our services around user needs

2. We can't afford to sit still – user expectations are evolving at the pace of technology development and talent is in high demand

3. We are becoming a modern digital government in an open innovation ecosystem

4. Our measure of success is satisfied users who have a simpler, faster, better experience with government

Digital Government

Transforming how government interacts with people

Making it easier

During the last decade, the explosion of digital technology has revolutionized entire industries —from transportation to retail sales.

Already in Ontario, nearly 90 per cent of people use the Internet regularly to make purchases, find information, learn new skills and interact.

Citizens are right to expect a lot from their government, and government should be constantly looking for ways to meet those expectations. The goal is to make life easier for people. Ontario will design government digital services that put people first and that are user-friendly.

To meet changing public expectations, Ontario is adopting a “digital-by-default” approach focused on making online services so easy to use that Ontarians prefer them over traditional methods of service delivery.
